***Reasons for allowance***

The following is an examiner's statement of reasons for allowance:

The claims are patentable over the prior art of record because the teachings of the references taken as a whole do not show or render obvious the combination set forth in claim 1, including a rotatable coupler connected between said first and second internal ends, said rotatable coupler being constructed to provide independent rotational coupling between said first and second internal ends, thus preventing any twist to said first and second tubes.

The prior art U.S. Patent '398 shows a one-piece wire disturbed on two reels, and the portion of wire is clamped at the center between the reels. Each reel is able to rotate independently because of the wire is clamped at the center, thus making the one-piece wire to twist.

The prior art U.S. Patent '961 shows a coupling passage with connection members, which allows a hollow member such as flexible rubber or vinyl tubing to pass through between reels. However, the connection members are not design to actually clamp each end of the hollow member, thus allowing each reel to rotate independently without twisting the wire.

Applicant's claimed device uses a rotational coupler with two separate pieces of tubing having internal ends coupled solely through the rotational coupler, which allows each reel to independently rotate without any axial twist to the tube and preventing restriction in the interior passage of the tube.
